

SHOHIDUL ISLAM ARIFBILLAH

Flutter Developer /GetX/Provider/ MVC Model

Kazipara, Dhaka Division, Bangladesh |shohidulislamarifbillah@gmail.com| 01837845138

PROFILE

A motivated Flutter Developer with expertise in Dart and MVC architecture. Proficient in building scalable applications using GetX state management. Experienced in REST API integration, WebSocket, and Data Visualization. Currently delivering high-performance mobile solutions and exploring the Provider pattern.

EDUCATION

Lakhimpur Polytechnic Institute.	2022 - Dec 2025
Diploma in Engineering (Computer Science & Technology) (3.44 CGPA)	
Mayura High School.	2021
Secondary School Certificate (4.28)	

TECHNICAL SKILLS

- **Languages & Core:** Dart, Java, OOP (Object-Oriented Programming).
- **Architecture & State Management:** MVC, GetX, Provider (Learning).
- **Backend & APIs:** REST API Integration, WebSockets, Stripe Payment Gateway.
- **Data Visualization:** FL Charts, Pie Charts, Progress Graphs.
- **Tools:** Android Studio, GitHub, UI/UX Design (Figma), MS Office.

PROFESSIONAL WORK EXPERIENCE

Sparktech IT Limited Dhaka, Bangladesh	December 2025 – Present
Developing cross-platform applications using MVC architecture for clean code separation. Collaborating with the MindMatrix AI Development team	
Industrial Attachment BDCalling IT	September 2025 – December 2025
Completed 3 months of intensive training on industry-standard Flutter development workflows.	

PROJECTS

Zeus Tucker (Fitness AI & Coach Management) Flutter, GetX, REST API
Multi-Role System: Developed a dual interface for Coaches to manage clients with exclusive workout/diet modules. • Progress Tracking: Built a daily meal and workout checklist with real-time progress synchronization. • Data Visualization: Integrated Pie Charts & Progress Graphs to analyze user consistency from the "Workout Book." • Engagement: Implemented a Story/Status module for coaches to share schedules and motivational content.
Home Tutor & Learning Integration Flutter, GetX, WebSocket, REST API
• Developed a multi-role app (Teacher, Student, Admin) with a secure Admin Approval system for class listings. • Integrated Location-based discovery to show nearby tutors to students based on GPS coordinates. • Implemented Real-time Messaging using Web Sockets for instant communication between users.

MotorBridge (Vehicle Management & Fleet Solution) | Flutter, GetX, Node.js, MVC

- **Real-time Vehicle Tracking:** Developed an automated system to track vehicle MOT, road tax, and insurance status using vehicle registration APIs.
- **Automated Reminders:** Integrated a smart notification engine that sends alerts for upcoming service dates and document renewals to prevent legal penalties.
- **Document Vault:** Built a secure centralized repository for users to upload and manage digital copies of vehicle logs, insurance papers, and maintenance receipts.
- **State & Data Management:** Utilized **GetX** for efficient state management and implemented a clean **MVC architecture** to handle complex logic between the Flutter UI and Node.js backend.
- **Premium Features:** Developed a subscription-based model offering advanced vehicle history reports and multi-vehicle management for commercial fleets.

Artisan (Service Marketplace App) | Flutter, GetX, Firebase, MVC

- **Service Provider Platform:** On-demand service booking system to connect users with local skilled workers (plumbers, electricians, cleaners).
- **Real-time Booking & Management:** Developed a dynamic booking flow where users can browse categories, view provider profiles, and schedule services instantly.
- **Location-Based Search:** Integrated Google Maps and Geolocation to help users find and book service providers based on their current proximity.
- **Interactive UI/UX:** Built a modern, user-friendly interface with custom Flutter widgets, ensuring a smooth navigation experience across all service categories.
- **Data Synchronization:** Used **Firebase** for real-time data handling and **GetX** to manage application state, maintaining high performance and responsiveness.

Aura (AI Emotional Support App) | Flutter, OpenAI, MVC, Admin Panel

- **AI Mood Analysis:** Developed a feature to analyze user emotions via text and provide personalized motivational feedback using AI.
- **Customizable Experience:** Integrated options for **Male/Female voice** output and **multi-language** support.
- **Audio Integration:** Added a toggle for background **Motivational Music** and meditation tracks managed via a central **Admin Panel**.
- **Clean Architecture:** Applied **MVC pattern** to separate AI logic from the UI, ensuring smooth performance.

Task Management System | Flutter, GetX, REST API

- **Full CRUD Integration:** Developed a productivity app with features to Add, Edit, Update, and Delete tasks via RESTful APIs.
- **State Management:** Utilized **GetX** for high-performance reactive UI updates without manual page refreshes.
- **Architecture:** Followed a clean directory structure to separate API services from business logic and UI components.
